

Bryan Alan A

Network Engineer - Fresher

+91 7871679540 | bryanofficial2004@gmail.com | LinkedIn | GitHub

Summary

Networking fresher with hands-on lab experience in enterprise switching, routing, VLAN design, Router-on-a-Stick (ROAS), SVI-based Layer 3 switching, and dynamic routing protocols (OSPF, RIP). Trained in Palo Alto firewall administration, including Site-to-Site IPsec VPN, SSL VPN, and NAT policy configuration. Proficient with Cisco Packet Tracer and Wireshark. Seeking a Network Engineer role to apply CCNA-level routing, switching, and network security fundamentals in a production environment.

Education

DMI college of engineering (BE in computer science)

Grade: 68%

2021 - 2025

Chennai, Tamilnadu

Seventh Day adventist matriculation HSS

Grade: 80%

2019 - 2021

Nagercoil, Tamilnadu

Technical Skills

Networking - OSI Model, TCP/IP, DNS, DHCP, ARP, ICMP, LAN/WAN, IPv4, Subnetting, VLAN, Trunking, ROAS, SVI, Static Routing, Default Routing, OSPF, RIP, Policy-Based Routing, STP, EtherChannel, Routing Table Analysis.
Firewall and Security - Palo Alto Firewall Administration, Security Policies Rule Configuration, NAT Configuration, IPsec VPN (Site-to-Site), SSL VPN (Remote Access), URL Filtering, HTTPS Inspection High Availability (HA), Virtual Wire Deployment, Syslog Configuration, Active Directory Integration, Link Monitoring / Path Monitoring.
Monitoring/Tools - Wireshark, Cisco Packet Tracer.

Projects

Enterprise Campus Network — Cisco Packet Tracer Project

February 2026

- Designed and Configured 6 VLANs with SVI-based Inter-VLAN Routing, 802.1Q trunking, and STP to provide segmented and loop-free network connectivity.
- Implemented High Availability Dynamic Routing using HSRP for gateway redundancy and OSPF for dynamic routing, providing automatic failover and reliable communication between multiple network segments.
- Configured Automated Network Services using DHCP/DHCP Relay, along with dedicated DNS and HTTPS servers. Successfully tested hostname resolution and web-server connectivity.
- Implemented NAT/PAT for 6 Internal Networks and verified real-time translations using show ip nat translations, allowing multiple private VLAN networks to share a single outside IP.

Firewall and VPN Implementation Lab

March 2026

- Configured firewall security policies and NAT rules.
- Set up secure Site-to-Site IPsec VPN tunnels using strong encryption (AES-256) for safe data sharing.
- Set up URL Filtering and HTTPS inspection to block bad websites and control user web traffic.
- Used Syslog, firewall traffic logs, and Wireshark to find and fix network drops quickly.

Training

CCNA Training

Jan 2026 - Feb 2026

- Configured OSPF and RIP dynamic routing across 3 routers, establishing scalable inter-network communication.
- Configured EtherChannel using LACP across 2 switch links for network redundancy and loop prevention.
- Practiced IPv4/IPv6 addressing, subnetting, DHCP, DNS, and NAT configuration and performed network troubleshooting using Cisco Packet Tracer and physical lab equipment.

Firewall Training

Mar 2026 - Apr 2026

- Configured Palo Alto firewall security policies and NAT rules in a lab environment to monitor inter-zone traffic.
- Implemented Site-to-Site IPsec VPN (Phase 1 and Phase 2) and SSL VPN configurations for secure site-to-site and remote-access connectivity.
- Monitored and analyzed firewall logs using Syslog and troubleshoot connectivity issues in real-time lab scenarios.
